

Technical and Product Requirements

TeamBudget

In order to meet the strict requirements of the Microsoft Gold Certified Partner Program, TeamBudget products have been tested by VeriTest.

Client Workstation Software Requirements

TeamBudget products are web based and do not require any installation on client machines. Supported web browsers are Microsoft Internet Explorer 8 and 9, Mozilla Firefox, Google Chrome, and Safari for Mac.

Server Software Requirements

TeamBudget is designed to be a web based solution that can be hosted remotely or set up on a new or existing server. If hosting locally, you will require the following on your server:

- Windows Server 2003 R2 or 2008 running IIS 6.0/7.0 (Standard, Enterprise or x64 Editions)
- ASP.NET
- Microsoft .NET Framework 4.0
- Microsoft SQL Server 2005, 2008, 2008R2, or 2012
- TeamBudget is supported in a virtualized server environment

Hosting

Questica offers a dedicated hosting solution on fault tolerant high availability servers as an alternative to installing TeamBudget on your premises.

Server Configuration

TeamBudget can be installed completely on one server or the application services can be separated onto as many as three servers (IIS, SQL Server and SQL Server Reporting Services).

Over 80% of TeamBudget installations use existing infrastructure and do not require additional hardware to be purchased.

A Questica representative can assess your infrastructure to recommend the most suitable configuration.

Installation and Upgrades

Typical installations of TeamBudget average 1 1/2 to 2 hours. Typical upgrades average 1 hour.

Installations can be completed remotely or onsite.
